Product Dozen Display

An Odoo 19 add-on that lets you view and enter a product's on-hand stock in dozens (with a configurable pack size) as “X Dozen Y Pcs” — on the product form, the products list, and inventory adjustments.

1. Introduction

Product Dozen Display is a small Odoo 19 add-on for shops that buy or sell items in dozens but track them as single pieces. It shows the on-hand quantity broken into full dozens plus the loose remainder (for example, 115 on hand becomes “9 Dozen 7 Pcs”), and it lets a stock manager type the on-hand quantity in dozens instead of pieces.

The “dozen” size is configurable per product — by default 12, but you can set any pack size (for example 6 or 15). The module never changes how Odoo stores stock; it only adds a friendlier way to read and enter the same Quantity On Hand.

1.1 What the module adds

- A per-product **Dozen Display** toggle on the product form that turns the feature on for that product.
- A **Pieces per Dozen** setting (default 12) that controls every dozen conversion for the product.
- An editable **On Hand (Dozens)** field — type the stock in dozens and Quantity On Hand fills in automatically.
- Read-only **On Hand (Dozen + Pcs)** and **On Hand (Pieces)** fields showing the same stock two ways.
- A **Counted (Dozens)** column on the inventory-adjustment screen, so physical counts can be entered in dozens.
- On install, it activates the built-in **Dozens** unit and enables the Units of Measure feature.

1.2 How it works

Quantity On Hand stays the single source of truth. The module simply converts between pieces and dozens using the product's **Pieces per Dozen** value:

The screenshot shows the Odoo Product form for 'Whiteboard Pen' (CONS_0001). The 'Dozen Display' field is checked, and the 'Pieces per Dozen' is set to 15. The 'Quantity On Hand' is 23,000. The 'On Hand (Dozens)' field shows 18.40, and the 'On Hand (Dozen + Pcs)' field shows 18 Dozen 6 Pcs. A red box highlights the 'On Hand (Dozens)' field with a note: 'First fill the On Hand (Dozens) field - the Quantity On Hand gets auto-calculated (Dozens x Pieces per Dozen).'

Figure 1: The dozen fields on the product form — the on-hand stock shown as full dozens plus loose pieces (18 Dozen 6 Pcs with a 15-piece pack).

NOTE The dozen fields apply to **countable** products — those measured in the Units family (single pieces, dozens, ...). Weight- or volume-based products do not show them.

1.3 Module summary

Property	Value
Technical name	product_dozen_display
Display name	Product Dozen Display
Version	19.0.1.0.0
Category	Inventory
Author	Alphalizer Technologies
License	LGPL-3
Dependencies	product, stock, uom
Type	Technical add-on (extends the Product and Inventory screens)

2. Installation

Installing the module is a standard Odoo add-on deployment. You need administrator access to the Odoo server and the database.

2.1 Prerequisites

- An Odoo 19 instance you can administer.
- The **Inventory** app installed (the module depends on product, stock and uom).
- Server access to the add-ons directory, or permission to upload modules through the interface.

2.2 Deploy the module files

Copy the **product_dozen_display** folder into your Odoo add-ons directory, then restart the Odoo service so the new module is detected.

2.3 Install from the Apps menu

TIP The module is a technical add-on (not an application), so clear the **Apps** filter in the search bar to find it in the list.

2.4 Verify the installation

- Go to **Inventory** > **Configuration** > **Units of Measure** — the **Dozens** unit (1 Dozen = 12) is present and active.
- Open any storable product and enable **Track Inventory** — a **Dozen Display** checkbox appears under Quantity On Hand.

3. The Dozen Fields

The module adds the following fields. All of them appear only when the product is storable and **Dozen Display** is enabled.

Field	Where	Editable	Purpose
Dozen Display	Product form	Yes (checkbox)	Turns the dozen feature on for this product.
Pieces per Dozen	Product form	Yes (number)	How many single pieces make one dozen (default 12).
On Hand (Dozens)	Product form	Yes (number)	Type the on-hand quantity in dozens; fills Quantity On Hand.
On Hand (Dozen + Pcs)	Product form + list	No	Shows on-hand as full dozens plus loose pieces, e.g. “9 Dozen 7 Pcs”.
On Hand (Pieces)	Product form	No	Shows the on-hand as a total number of single pieces.
Counted (Dozens)	Inventory adjustment	Yes (number)	Enter a physical count in dozens; fills Counted Quantity in pieces.

4. Using the Module

4.1 Enable Dozen Display on a product

The screenshot shows the 'Product' form for 'Apple'. The 'General Information' tab is active. Under 'Product Type', 'Goods' is selected. Under 'Invoicing Policy', 'Ordered quantities' is selected. Under 'Track Inventory', the checkbox is unchecked. The 'Sales Price' is \$1,000 per Units, 'Sales Taxes' is 15% X, 'Cost' is \$0,000 per Units, and 'Purchase Taxes' is 15% X. The 'Quantity On Hand' is 13,000 Units. The 'Dozen Display' checkbox is not visible.

Figure 2: A newly created product — with Track Inventory off, no dozen fields are shown.

The screenshot shows the 'Product' form for 'Apple' with 'Track Inventory' checked. The 'Quantity On Hand' is 13,000 Units. The 'Dozen Display' checkbox is now visible under 'Quantity On Hand' and is unchecked. The 'Sales Price' is \$1,000 per Units, 'Sales Taxes' is 15% X, 'Cost' is \$0,000 per Units, and 'Purchase Taxes' is 15% X. The 'Quantity On Hand' is 13,000 Units. The 'Dozen Display' checkbox is now visible under 'Quantity On Hand' and is unchecked.

Figure 3: Turn on Track Inventory — the Dozen Display checkbox appears under Quantity On Hand.

Figure 4: Tick Dozen Display — the dozen fields appear (13 pieces with a 12-piece pack reads 1 Dozen 1 Pcs).

4.2 Set Pieces per Dozen

In **Pieces per Dozen**, enter how many single pieces make one dozen for this product. It defaults to **12**, but you can set any value (for example 6 or 15). Every conversion for this product uses it.

Mitchell Admin 7:39 PM No → Yes (Track Inventory)

Mitchell Admin 7:39 PM Product created

Figure 5: Changing Pieces per Dozen to 15 recalculates every dozen field instantly — the same 13 pieces now read 13 Pcs (0.87 dozens).

TIP Each product has its own pack size — eggs can be 12 while another item is 6 or 15.

4.3 Enter the on-hand quantity in dozens

Figure 6: Type 3 in On Hand (Dozens) — a popup asks you to confirm the change from 13 to 45 pieces (3 Dozen × 15).

Figure 7: After confirming, Quantity On Hand becomes 45 and the breakdown reads 3 Dozen.

NOTE The confirmation appears only when your entry actually changes the current Quantity On Hand. Re-typing the same value does not prompt.

4.4 Read the on-hand breakdown

On Hand (Dozen + Pcs) shows the current stock as full dozens plus the loose remainder (for example “9 Dozen 7 Pcs”), and **On Hand (Pieces)** shows the same stock as a total piece count. The “Dozen + Pcs” value also appears as a column on the products list.

4.5 Count in dozens during an inventory adjustment

5. Troubleshooting

Symptom	Cause & fix
The Dozen Display checkbox is missing.	The product must be storable (Track Inventory on) and measured in the Units family. Hard-refresh the browser after installing or upgrading.
The dozen fields do not appear after ticking the checkbox.	Save is not required, but a stale browser can hide them — do an empty-cache reload (Ctrl+Shift+R).
Quantity On Hand shows dozens, not pieces.	The product's Unit of Measure is “Dozens”. Set it to “Units” if you want Quantity On Hand counted in single pieces.
The confirmation popup does not show.	The widget did not load — do an empty-cache reload so the browser fetches the latest assets.

The screenshots below show the "Quantity On Hand shows dozens, not pieces" situation on a product whose Unit of Measure is set to Dozens:

Figure 8: Entering 2 in On Hand (Dozens) with a 15-piece pack — the popup correctly confirms the change to 30 pieces (2 Dozen × 15).

The screenshot shows the Odoo Product form for 'Whiteboard Pen' (CONS_0001). The 'General Information' tab is active. The 'Quantity On Hand' is 2.500 Dozens. A red callout box states: 'First fill the On Hand (Dozens) field - the Quantity On Hand gets auto-calculated (Dozens x Pieces per Dozen)'. The 'Pieces per Dozen' is 15. The 'On Hand (Dozens)' is 2.00. The 'On Hand (Dozen + Pcs)' is 2 Dozen. The 'Sales Price' is \$ 1.200 per Dozens. The 'Sales Taxes' is 15% X (= \$ 1.380 Incl. Taxes). The 'Cost' is \$ 0.000 per Dozens. The 'Purchase Taxes' is 15% X. The 'Category' is Goods. The 'Reference' is CONS_0001. The 'Barcode' is empty. The 'Company' is Visible to all.

Figure 9: Because this product's Unit of Measure is Dozens, the confirmed 30 pieces display as "2.500 Dozens" in Quantity On Hand — set the UoM to Units to count in single pieces.
