

NEXGENN

VAN-SALE FOR ODOO 19

POS RECEIPT PREVIEW

Backend User Guide

See exactly how a POS order's receipt will look — at any paper size — right inside Odoo, matching the app receipt down to the signatures.

A simple guide to previewing a POS receipt from the back office: opening it, choosing the paper size, what the receipt shows, and how to print or download it — no technical setup required.

Module Version 19.0.1.0.0 · Odoo 19 · Point of Sale

About POS Receipt Preview

POS Receipt Preview lets you look at a sale's receipt from the Odoo back office, without needing the phone or a printer to hand. It adds a **Preview Receipt** button to the order screen that opens the receipt exactly as the NEXGENN VAN-SALE app prints it — the same bilingual layout, items, totals, payment details and signatures. It's handy for checking a receipt, reprinting one for a customer, or saving a copy as a PDF.

Nothing new is stored — the preview simply reads the order's existing details, so what you see always matches the real sale.

How to Preview a Receipt

1. **Open an order** — go to Point of Sale → Orders → Orders and click the sale you want.
2. **Click “Preview Receipt”** — the button sits at the top of the order screen (with an eye icon).
3. **Choose a paper size** — a small popup appears; pick the size you want and click **Preview**.
4. **View, print or download** — the receipt opens on screen; use the toolbar to print or download it as a PDF.

Choosing the Paper Size

The popup offers the **same six sizes the app does**, so the preview looks just like the printed slip. The default is 3.5 inch (80 mm), the common receipt-printer width:

- **2 inch** (50 mm) — small thermal printer
- **3 inch** (76 mm)
- **3.5 inch** (80 mm) — default
- **4 inch** (100 mm)
- **A5** (148 mm)
- **A4** (210 mm) — full page

What the Receipt Shows

The preview reproduces the app receipt, top to bottom:

- **Shop letterhead** — company name, address, phone and email.
- **Order details** — customer, cashier, date and receipt number.
- **Items table** — each product with quantity, unit price, discount and line total (bilingual English / Arabic headings).
- **Totals** — subtotal, discount and tax (shown only when they apply), and the grand total.
- **Payment details** — each payment method and amount, split payments if any, and change due.
- **Signatures** — the customer and cashier signatures captured at sale time, when present.

Printing & Downloading

Once the receipt is on screen, the report toolbar's **Print** / **Download** produces a PDF the normal Odoo way. The file is auto-named after the order (for example "Receipt - Shop-000004"), and short receipts are laid out to fit neatly on a single page.

Good to Know

- The preview is **view-only** — it never changes the order; it just shows the receipt.
- Signatures appear only if they were captured for that sale; otherwise their space is simply left blank.
- The receipt reads right-to-left with English / Arabic labels, matching the app's bilingual slip.
