POS Dynamic Invoice

User Manual

Odoo 19 module that turns the Point of Sale receipt into an admin-editable, branded invoice — logo, company details, GST number, header and footer — rendered server-side at every receipt size and shown live on the mobile POS app.

Module `pos_dynamic_invoice`

Version `19.0.1.0.0`

Platform Odoo 19 + React Native POS register

Audience Shop owners, POS managers, and Odoo administrators

1. Introduction

POS Dynamic Invoice is an Odoo 19 add-on that turns the Point of Sale receipt into a branded, admin-editable document. Instead of a fixed slip that can only be changed by releasing a new version of the mobile app, the shop can edit its own receipt — **logo, company details, GST / VAT number, header title and footer message** — directly from Odoo, and the change appears on the very next sale.

The receipt is built on the server and rendered at the **same six paper sizes** the POS app offers, from a 2" thermal slip up to a full A4 page. The React Native POS register asks Odoo for this dynamic invoice at print time; when the module is installed and switched on, the app shows the branded invoice, otherwise it keeps using its own built-in receipt.

1.1 What the module adds

- **Invoice Settings screen** (Point of Sale → Invoice Settings) where the shop edits the receipt branding — no developer needed.
- **Editable letterhead** — logo, address, phone, email and VAT / GST number, each falling back to the company record when left blank.
- **Editable header title and footer message** (bilingual English / Arabic by default).
- **Show / hide toggles** for the tax row, the customer and cashier signatures, the logo and the footer.
- **Preview Receipt button** on every POS order in the back office, to view and print the invoice at any paper size.
- **A master switch, “Use Dynamic Invoice on App”,** that decides whether the mobile app shows this branded invoice or its normal built-in receipt.

1.2 How the dynamic invoice works

The module reads a sale’s existing details — customer, cashier, items, discounts, taxes, payments and the signatures captured at checkout — and lays them out using the branding you configured. It does **not** store any new data on the order; it simply presents what is already there in a branded, editable form.

1. The shop configures its branding once in **Invoice Settings**.
2. When a receipt is needed, Odoo combines the order’s data with that branding and renders the invoice as a self-contained document.
3. On the app the receipt is fetched for the chosen paper size and shown or printed instantly; in Odoo the same document opens through the **Preview Receipt** button.

NOTE Every branding field is optional. A blank field quietly falls back to the matching company value, so the invoice is never worse than the standard receipt — even before anyone fills anything in.

1.3 Normal receipt vs. dynamic invoice

Installing the module does not force the branded invoice on anyone. A master switch, **Use Dynamic Invoice on App**, controls what the shop actually sees:

- **Switch OFF (default)** — the app and the back-office preview show the plain receipt: company details, the default title and footer, no logo and no GST line. This looks identical to the app's original built-in receipt.
- **Switch ON** — the branded dynamic invoice takes over, applying the logo, address, GST number, custom header / footer and the show / hide toggles you set.

This lets a shop install the module now and switch to the branded invoice whenever it is ready, with no interruption to daily sales.

1.4 Module summary

Property	Value
Technical name	<code>pos_dynamic_invoice</code>
Display name	POS Dynamic Invoice
Version	<code>19.0.1.0.0</code>
Category	Point of Sale
Author	Alphalze Technologies
License	LGPL-3
Dependencies	<code>base</code> , <code>point_of_sale</code>
Type	Add-on module (installed under Point of Sale; not a standalone app tile)

2. Installation

Installing the module is a standard Odoo add-on deployment. You need administrator access to the Odoo server and to the Odoo database.

2.1 Prerequisites

- An Odoo 19 instance that you can administer.
- The Point of Sale application (`point_of_sale`) installed and configured.
- Server-level access to the Odoo add-ons directory, or permission to upload modules through the interface.
- The React Native POS register app, connected to the same Odoo database (required only if you want the branded invoice to appear on the mobile app).

2.2 Deploy the module files

1. Stop the Odoo service before copying files, to avoid stale cached code:

```
net stop odoo
```

2. Copy the `pos_dynamic_invoice` folder into your Odoo add-ons path. A typical Windows path looks like this:

```
C:\Program Files\Odoo 19\server\odoo\addons\pos_dynamic_invoice
```

3. If you are replacing an earlier copy, delete the old `pos_dynamic_invoice` folder completely first, then copy in the fresh files. Do not merge folders.
4. Start the Odoo service again:

```
net start odoo
```

IMPORTANT On Windows, Odoo can keep running old code from cached bytecode files after an update. If the module behaves unexpectedly after an upgrade, stop the service, delete the module folder entirely, copy the fresh files, and only then upgrade from the Apps menu.

2.3 Install from the Apps menu

1. Log in to Odoo as an administrator.
2. Open the **Apps** menu.
3. Click **Update Apps List** (you may need developer mode to see this option). Confirm the update.
4. Search for **POS Dynamic Invoice**.
5. Click **Activate** (or **Install**) on the module card.

Odoo installs the module along with its dependencies. Once finished, a new **Invoice Settings** entry appears under the Point of Sale menu.

2.4 Verify the installation

After installation, confirm everything is in place:

- Point of Sale → **Invoice Settings** opens the branding screen.
- Opening any POS order shows a **Preview Receipt** button in the form header.
- Clicking **Preview Receipt** and choosing a size renders the receipt on screen.

TIP Right after installing, the master switch is **off**, so both the preview and the app show the plain receipt. That is expected — turn the switch on when you are ready to apply your branding (see section 4.1).

3. Invoice Settings

All branding lives on a single per-company record at **Point of Sale** → **Invoice Settings**. There is one record per company; Odoo creates it automatically the first time it is needed. The fields are described below.

Field	Type	What it does
Use Dynamic Invoice on App	Toggle	Master switch. Off (default) keeps the normal built-in receipt; on renders this branded invoice on the app and in the preview.
Address	Text	Free-text address, one line per row. Falls back to the company address when blank.

Field	Type	What it does
Phone	Text	Contact phone shown in the header. Falls back to the company phone.
Email	Text	Contact email shown in the header. Falls back to the company email.
VAT / GST Number	Text	Tax registration number printed below the address. Falls back to the company VAT.
Show Logo	Toggle	Show or hide the logo at the top of the receipt.
Invoice Logo	Image	The logo image. It is automatically downscaled for a crisp, lightweight receipt.
Header Title	Text	The boxed title under the letterhead. Default: a bilingual "INVOICE".
Footer Text	Text	The closing message at the foot of the receipt. Default: a bilingual "Thank you for your purchase!".
Show Tax Row	Toggle	When off, the Tax line is hidden even if the order carries tax.
Show Customer Signature	Toggle	When off, the customer signature is hidden even if one was captured.
Show Cashier Signature	Toggle	When off, the cashier signature is hidden even if one was captured.
Show Footer	Toggle	When off, the footer message is hidden.

NOTE The company **name** always comes from the Odoo company record — there is no separate brand-name field — so it stays consistent across Odoo. Every other branding field is optional and falls back to the company record when left empty.

4. Using the Module

Once installed, the module needs a one-time setup: turn the switch on and fill in your branding. After that it works on its own — every sale is rendered with your invoice.

4.1 Turning the dynamic invoice on

1. Go to **Point of Sale** → **Invoice Settings**.
2. Turn on **Use Dynamic Invoice on App**. The branding fields appear.
3. Save. From now on the app and the preview show the branded invoice.

NOTE While the switch is off, the settings screen shows a banner reminding you the app is still on its normal built-in receipt. The branding fields stay hidden until you turn the switch on.

4.2 Customising the branding and logo

With the switch on, fill in only what you want to change — anything left blank keeps the company value:

- **Address, Phone, Email, VAT / GST** — override the letterhead details.
- **Invoice Logo** — upload your shop logo and keep **Show Logo** on. The image is automatically resized, so even a large file stays light on the receipt.
- **Header Title and Footer Text** — set your own wording; both accept bilingual text.
- **Show Tax / Signatures / Footer** — hide any of these lines you do not want printed.

4.3 Previewing a receipt in Odoo

1. Go to **Point of Sale** → **Orders** and open any order.
2. Click **Preview Receipt** in the form header (it has an eye icon).
3. Choose a paper size in the popup and click **Preview**.
4. The receipt opens on screen; use the report toolbar's **Print / Download** to produce a PDF the normal Odoo way.

TIP The preview honours the master switch: with the switch off you see the plain receipt, with it on you see the branded invoice — exactly what the app will show for that sale.

4.4 Choosing the paper size

The popup offers the same six sizes the app does, with **3.5 inch (80 mm)** — the common receipt-printer width — as the default:

- **2 inch** (50 mm) — small thermal printer
- **3 inch** (76 mm)
- **3.5 inch** (80 mm) — default
- **4 inch** (100 mm)
- **A5** (148 mm)
- **A4** (210 mm) — full page

4.5 How the app shows the invoice

The mobile POS app checks Odoo at login and when it returns to the foreground: if this module is installed **and** the master switch is on, the app fetches the branded invoice from Odoo and shows it at the chosen paper size. If the module is missing or the switch is off, the app quietly falls back to its own built-in receipt. Cashiers do nothing differently — the correct receipt simply appears at checkout.

NOTE Branding changes take effect on the next receipt. There is nothing to redeploy or reinstall on the devices — the invoice is rendered by Odoo each time, so editing it in Invoice Settings is enough.

5. Troubleshooting

Most issues come down to one of two things: the master switch is off, or the module was not deployed cleanly. The table below covers the common cases.

Symptom	What to check
The app still shows the plain receipt	Open Invoice Settings and confirm Use Dynamic Invoice on App is on. The app re-checks at login and when brought back to the foreground, so restart or re-open it after switching on.
Logo does not appear	Confirm a logo image is uploaded and Show Logo is on. Both are required.
Address / phone / GST is wrong	A blank field falls back to the company record. Fill the field in Invoice Settings to override, or correct the company details.
Tax line missing	The Tax row shows only when the order actually carries tax and Show Tax Row is on. Check both.
Signature missing	A signature shows only if it was captured at checkout and its toggle is on. Verify the signature exists on the order and the matching toggle is enabled.
Invoice Settings menu is missing	Confirm the module shows as Installed, run Update Apps List and try again, then refresh the browser (menus are cached client-side).
Odd behaviour after an upgrade	Usually stale cached code on Windows. Stop the service, delete the whole module folder, copy the fresh files, restart, then upgrade from the Apps menu.

6. Frequently Asked Questions

Q. Do I need a new app release to change the receipt?

A. No. That is the whole point of the module — the branding is edited in Odoo and applies to the next receipt, with no app update.

Q. Does the module store any new data on the order?

A. No. It reads the order's existing details (items, totals, payments, signatures) and only adds branding on top. Nothing new is written to the order.

Q. What happens when the master switch is off?

A. Both the app and the back-office preview show the plain built-in receipt. Installing the module changes nothing until you turn the switch on.

Q. What if I leave a branding field blank?

A. It falls back to the matching company value, so the receipt is always complete. Fill a field only when you want to override the company detail.

Q. Can I use different branding for different companies?

A. Yes. Settings are per company — there is exactly one Invoice Settings record for each company.

Q. Will a large logo slow down the receipt?

A. No. The logo is automatically downscaled before it is placed on the receipt, so even a multi-megabyte image becomes small and prints quickly.

Q. Does the module work without the Point of Sale app installed?

A. No. It depends on `point_of_sale` and extends the POS order. Point of Sale must be installed first.

Q. Can I preview the receipt without the mobile app?

A. Yes. Every POS order in the back office has a Preview Receipt button that renders the invoice at any of the six paper sizes and lets you print or download it.

Appendix A: Quick Reference

Where to find things

I want to...	Go to
Turn the branded invoice on or off	Point of Sale → Invoice Settings → Use Dynamic Invoice on App
Edit logo, address, GST, header / footer	Point of Sale → Invoice Settings
Preview or print a receipt	Point of Sale → Orders → open order → Preview Receipt
Reinstall or upgrade the module	Apps menu → search “POS Dynamic Invoice”

Deployment commands (Windows)

```
:: stop the Odoo service before swapping module files
net stop odoo
:: (delete the old module folder, copy in the fresh one)
:: start the service again
net start odoo
```

At a glance

Item	Detail
Module	<code>pos_dynamic_invoice</code>
Version	<code>19.0.1.0.0</code>
Configured at	Point of Sale → Invoice Settings (one record per company)
Master switch	Use Dynamic Invoice on App (off by default)
Editable	Logo, address, phone, email, GST, header, footer, show / hide toggles
Paper sizes	2", 3", 3.5" (default), 4", A5, A4
Depends on	<code>base</code> , <code>point_of_sale</code>
